Capital and shareholder matters

The company is well capitalized under the Solvency II regime. Solvency capital requirement (SCR) ratio using standard formula was 185% as of 31.03.2017.

The Swedish branch is under investigation from the Swedish Competition Authority. The control seems to be grounded in a complaint and to be related to competition in tendering processes mainly in the public sector. Protector is cooperating closely with the authorities.

Prospects

Protector expects continued strong growth in 2017, despite strong competition in all markets. The expected growth is based on a good start in 2017 in most geographic markets and a high level of signed contracts in Norway, Sweden and UK, effective from Q2/Q3.

The Board is satisfied with the overall premium growth, the financial results, and the measures taken to improve our business in Denmark.

The uncertainty in claims development, and the inherent volatility of capital markets, are regarded as the most important risk factors that could affect the company's profit in 2017.

Accounting principles

These interim accounts have been prepared in accordance with IAS 34 and in line with the accounting principles described in the annual report for 2016. The company's financial statements are prepared in accordance with the Norwegian Accounting Act, financial statement regulations for insurance companies and generally accepted accounting principles. For further information, please see the 2016 annual report.

The financial statement regulation for insurance companies has been revised effective as of January 1, 2016. These revisions led to a change in the accounting policies regarding the security provision, which is no longer required by the regulations. As of December 31, 2015, the provision, which was included in the balance sheet with NOK 584,4m, was restated with 75% as other (earned) equity and 25% as deferred tax liability. The comparative amounts for prior periods have been restated accordingly.

Furthermore, allocated return on investments are no longer transferred from non-technical to technical account due to the changes in the regulation. All comparative amounts for prior periods have been restated.

Fair value of financial assets traded in active markets are based on market value on the accounting day. A market is considered active if the market rates are easily and regularly available from a stock exchange, distributor, broker, industrial classification, price-setting service or regulatory authority, and these prices represent actual and regularly occurring market transactions at arm's length. The market price applied to financial assets is the existing bid price. These instruments are included in level 1.

Fair value of financial instruments not traded in an active market is determined by using valuation methods. These valuation methods maximise the use of observable data where available, and are based as little as possible on own estimates. The instrument is included in level 2 if all essential data are based on observable market data.

The instrument is included in level 3 if one or more essential data are not based on observable market data.
